ASEAN GEOSPATIAL SUMMIT

Bringing Together ASEAN Geospatial Communities

About the Summit

ASEAN Geospatial Summit is the first ever initiative taken in geospatial industry to bring together South East Asian national mapping organisations and space agencies at one platform. The forum is being organised as an integral part of GeoSmart Asia 2015 – the premier event for the Asia Pacific bringing together geospatial professionals from different industry domains in the region.

Introduction

South East Asia region faces several common challenges and opportunities, thus offering greater options for collaboration and partnerships in exploiting technology and practices while addressing the challenges and carrying forward their quest for development. Reliable and accurate geospatial data is the foundation for all kinds of information systems. Realising the need for greater cooperation and collaboration in the field of geospatial information in South Asia region, Geospatial Media is taking initiative to bring together ASEAN geospatial information leaders at one platform. In view of current focus on strengthening and collaboration in this region to transform South East Asia into a global power, ASEAN Geospatial Summit is being organised as an integral part of GeoSmart Asia, on **September 30, 2015 in Kuala Lumpur, Malaysia.**

Objectives

- Bring together key stakeholders of geospatial information – national mapping organisations, space agencies, SDIs (spatial data infrastructure) and apprise them with latest developments in geospatial technology
- Facilitate interaction between geospatial information providers and geospatial technology providers
- Offer opportunities for collaboration and strengthening partnerships amongst South East Asian countries in the application of geospatial technologies
- Explore business opportunities of geospatial data for geospatial information providers

Target Audience

- Survey & mapping agencies
- Space agencies
- Geospatial technology providers
- SDIs

About GeoSmart Asia

Over the years, Asia Geospatial Forum has established itself as the most premier conference and exhibition on geospatial technologies and applications in Asia Pacific. The conference welcomes about 1000+ high profile delegates from policy makers, technology providers, end-user segments and academic communities across the region every year. As our response to address the evolution, changes and innovation of geospatial technology, Asia Geospatial Forum is Now GeoSmart Asia. The brand new GeoSmart Asia shall delve into the immense scope and the very critical role of advanced, latest and smarter geospatial technologies across various sectors that contribute to progressive and sustainable development of the region.

About Geospatial Media & Communications

Geospatial Media and Communications has been exclusively dedicated to promote and facilitate growth of geospatial industry and connect the same with major domains worldwide like Land Administration. Headquartered in India, it has localised presence in United Arab Emirates, Brazil, South Africa, Malaysia, The Netherlands and United States of America. We are a strong team of more than 80 highly skilled and specialized professionals hailing from multitude fields including space technology, engineering, geo-information, geology, journalism, marketing and international business.
